Attributsetvorlagen definieren oder ändern

If you want to exchange data in accordance with the IFC standard, you need a basic set of properties. However, creating a property set template from scratch is not only time-consuming but also prone to errors. Therefore, you can*not* do this in Bimplus.

But you can create your own property set templates by copying the predefined property set templates and customizing these copies to suit your needs and requirements. All predefined property set templates contain the minimum of property sets required in accordance with the IFC standard. This ensures that all property set templates derived comply with the minimum requirements in accordance with the IFC standard.

To create your own property set template, copy one of the predefined property set templates and customize the copy by changing or adding property sets.

Copying property set templates

To copy a property set template

This is only possible if ...

Property manager is open (see "Opening the property manager")

1. Open the list box for the property set template (on the left side of the table header) and select the template that you want to copy.

2. Click ⦙ **Property set templates options** to the right of the list box and select ⧉ **Copy**.

3. You can see the **Copy** dialog box. Enter a name for the new property set template and click **COPY**.
